EDUCATION

Brigham Young University - Provo

January 2023 - April 2027

Bachelor's, Computer Science

GPA: 4.0

- Emphasis: Machine Learning
- Minors: Statistics and Mathematics
- Relevant Courses: Advanced Software Engineering, Algorithms, Machine Learning, Software Design, Data Analytics, Data Structures

PROFESSIONAL EXPERIENCE

Brigham Young University

April 2026 - Present

Software Engineering Developer

Provo, UT, USA

- Developed and shipped new features for a full-stack automated grading platform supporting 200+ users/students and 1200+ programming submissions
- Supported product management decisions by identifying recurring user pain points and prioritizing bug fixes/features for platform improvements
- Applied software engineering, debugging, and system design principles within a large collaborative codebase while contributing to feature planning, testing, and platform optimization

Spot Parking

May 2025 - September 2025

Machine Learning Back-End Developer

Provo, UT, USA

- Developed a Computer Vision prediction model with TensorFlow package in Python, resulting in a classification accuracy increase to 98%
- Fine-tuned XGBoost models to detect cars and license plates on live camera feeds in parking lots with 200 parking spaces
- Debugged, tested, and optimized code to improve reliability and performance of parking data systems

Brigham Young University

January 2024 - April 2026

Computer Science Teacher's Assistant

Provo, UT, USA

- Collaborated closely with course staff to enhance learning experiences and support students in a Javabased Advanced Software Construction course
- Designed and implemented programming assignments, readings, projects, and tests for Python computer science course, resulting in deeper student understanding
- Presented insights and group progress in weekly meetings, demonstrating effective communication while discussing future direction

PROJECTS

Full-Stack Chess Application - [Link to project](#)

- Developed a full-stack multiplayer chess application featuring complete game logic, user authentication, persistent game storage, and real-time gameplay over WebSockets
- Designed and implemented a layered server architecture with RESTful APIs, SQL database persistence, and session management to support concurrent players
- Built comprehensive unit tests for service, database, and client components while applying object-oriented design principles and version control throughout development

Tweeter (Twitter Clone) | Full-Stack Web Application - [Link to project](#)

- Designed and implemented REST APIs and a layered architecture consisting of presentation, service, and data access layers with persistent cloud storage
- Leveraged AWS cloud infrastructure services including S3 for image storage and scalable backend infrastructure while implementing secure password hashing, token-based authentication, pagination, and automated testing
- Engineered end-to-end social networking application supporting authentication, user profiles, feeds, stories, follower relationships, and real-time status distribution

SKILLS

Data Science & ML Frameworks: Scikit-learn, Tensorflow, Pandas, Seaborn, MATLAB, NumPy, Xgboost, Pytorch, Keras

Programming Languages: Python, Java, R, React, TypeScript, Next.js, C/C++, Jupyter, JavaScript, HTML, Spring, FastAPI

Machine Learning & AI: Reinforcement Learning, Predictive Models, Neural Networks, Deep Learning, Computer Vision, Feature Engineering, Claude, Codex
